

Checklist for ALL labs

- Create Javadoc comment for each public method and each class.
- Write Javadoc description for the class, for the methods, parameters and return.
- In the class description, you should have the tag *@author*.
- Generate the Javadoc file at the end of the lab.
- **ALL** instance variables **MUST** be private.
- Override the toString() method.
- Use the Annotation *@Override* every time you override a method.
- Follow the name conventions (e.g.)
 - Classes: MyClass
 - Variables: myVariable
 - Methods: myMethod()
 - Constants: MY_CONSTANT
 - Packages: ca.ciccc.java.model
- Use proper indentation.
- Create a Driver class that contains the **main** method.
- Create packages. Do NOT use the default package anymore.
- Each method and each instance variable should have a visibility modifier.
- Do NOT create unnecessary instance variables.
- Do NOT use “magic numbers”. Create constants and use in the code. You can create as many constants as necessary.
